Abstracts

Wireless intrusion detection systems (WIDS) and wireless intrusion protection systems (WIPS) are used to continuously protect a wireless network and in some cases, a wired network, from unauthorized users. There are some basic differences between the two systems. In a WIDS, a system of sensors is used to monitor the network for the intrusion of unauthorized devices, such as rogue access points. In a WIPS, the system not only detects unauthorized devices, but also takes steps to mitigate the threat by containing the device and detaching it from the wireless network.

Based on the Wireless Intrusion Detection and Prevention Systems (WIPDS) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
