Abstracts

Wireless speakers connect to devices using Bluetooth, wi-fi or both. A Bluetooth connection sets up a one-to-one link between source device (phone, tablet, laptop or TV) and the speaker, over which digital audio data is transmitted; this is known as 'pairing'. Bluetooth used to offer lower sound quality and shorter range, but advances in the technology mean that high-quality signals can now be carried over longer distances (up to 60 metres with Bluetooth 4.0). Wi-fi speakers usually connect to source devices over a shared wi-fi network rather than a direct device-to-device link like Bluetooth. Wi-fi is a stable, long-range wireless connection with high potential data transfer rates, which means it's still the preferred wireless technology for those looking for the very highest audio quality.
