Abstracts

Wound fillers are a set of items that include gels, foams, pads, pastes, ropes, or any other formulation that does not stick. They are used to fill the wound and fulfill the duties of managing the moisture and absorbing the exudate. A secondary dressing has to be used over them as they are primary dressings and need to be secured in place. These wound packing products are used in deep wounds where there is a possibility of the exudate pooling in the vacant space. The absorbency of the filler depends on the product used.
