Abstracts

WPA, LSG and FT, and NMS are solutions used to monitor and manage performance of networks. WPA analyses the data being transmitted through a network. Hence, packet analyser software is used to analyze the traffic of networks, perform security checks, monitor for threats, identify the root cause of an attack, and debug networks. LSG and FT are used to test an application under conditions of extreme stress. FT is performed at every stage of development to prevent any issues at a later stage. Network monitoring provides information necessary for network management. It is used to locate problems in the network. With the expansion of networks to remote locations, the adoption of network monitoring techniques is increasing.
