## Abstracts

In broad terms, virtualization can be considered a method of abstracting an underlying technology layer.<sup>1</sup> This provides productivity benefits via an agreed interface that standardizes underlying complexity. Virtualization, therefore, comes in multiple forms, ranging from network (virtual local-area networks), to storage (volumes), to application (Java Virtual Machines) and beyond. This market focuses on three market categories of virtualized compute offerings for server environments: x86 server virtualization (hypervisor) VM-integrated containers x86 operating system (OS) virtualization (Linux and Windows containers)

Based on the X86 Server Virtualization Infrastructure market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
