Abstracts

Xylitol is a natural carbohydrate, classified as a polyhydric alcohol or sugar alcohol. All 5 carbon atoms bind to a hydroxide group; thus, the molecule has no reducing groups. This polyol is a sugar substitute with 40% less calories and a member of the sugar alcohol or polyol family, which includes other common dietary sweeteners such as sorbitol, mannitol, and maltitol. It is a natural sweetener found in low concentrations in fibres of many fruits and vegetables. It can also be extracted from berries, oats, mushrooms, corn husks and sugarcane bagasse. The industrial production starts from a hemicellulose extracted mainly from corncobs or hardwood, which is hydrolyzed into xylose and catalytically hydrogenated to the end product.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Xylitol Acid market covering all its essential aspects.
