Abstracts

Xylitol is a natural carbohydrate, classified as a polyhydric alcohol or sugar alcohol. All 5 carbon atoms bind to a hydroxide group; thus, the molecule has no reducing groups. This polyol is a sugar substitute with 40% less calories and a member of the sugar alcohol or polyol family, which includes other common dietary sweeteners such as sorbitol, mannitol, and maltitol. It is a natural sweetener found in low concentrations in fibres of many fruits and vegetables. It can also be extracted from berries, oats, mushrooms, corn husks and sugarcane bagasse. The industrial production starts from a hemicellulose extracted mainly from corncobs or hardwood, which is hydrolyzed into xylose and catalytically hydrogenated to the end product.

Based on the Xylitol Acid market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
