Abstracts

Zinc-Nickel Alloy plating has more corrosion-resistance than galvanized plating. Therefore, various bathes have been examined, for example, sulfate bath, chloride bath, cyanide bath, etc. However, Zinc-Nickel Alloy plating became of practical use in recent years. The first practical use of this plating in Japan was when the steel plate for cars was made in the assembly line. It was developed for solving the corrosion by salt that is scattered on the roads in winter in North America and Europe prevent freezing. The steel companies have competed with others in supplying Zinc-Nickel Alloy plating to the market. The practical application of Zinc-Nickel Alloy plating to the general plating method by rack and barrel has fallen behind the times, because it was difficult to get uniformity because of the range of the electric current density and to extract the Nickel. Now ways have been developed because chemicals have been found that give the plating sheen and to extract the Nickel.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Zinc Nickel Alloy Plating market covering all its essential aspects.
