Abstracts

Zinc rich primers contain zinc metal in a finely powdered form for the protection of steel against corrosion. Zinc-rich compounds can be applied by spray or by brush to steel. Zinc, being less noble than steel, forms hydroxycarbonate salt when it corrodes that bonds with the existing zinc in the film coating while upholding galvanic protection. This creates an advanced, self-healing film that ensures the metal surface beneath the coating stays protected. Zinc rich primer is one of the more effective means of sealing critical equipments from moisture, protecting it from rust and corrosion.
