## Abstracts

Military Cyber Weapons are software and IT systems that, through Information and Communication Technology (ICT) networks, manipulate, deny, disrupt, degrade, or destroy targeted information systems or networks. Commonly, cyber technology will have dual functions: attack/defense, peaceful/aggressive, legal/illegal. A large number of cyber operations use computer administration tools that have multiple uses. In these cases, the difference lies in the intent of the user, not the capability of the cyber tool. The global military cyber weapon market is dominated by companies based in the United States, Israel and EU

The report "Global Military Cyber Weapons - Market and Technology Forecast to 2027" examines, analyzes, and predicts the evolution of military cyber weapon technologies, markets, and outlays (expenditures) over the next 8 years ( 2019-2027) in the defense Industry. It also examines military cyber weapons markets geographically, focusing on the top 95% of global markets, in the United States, Europe, and Asia.

Throughout the report we show how military cyber weapons are used today to add real value. To provide the most thorough and realistic forecast, this report provides a twin-scenario analysis, including "steady-state", emergence of new military cyber weapons technology.
