Abstracts

Unmanned Surface Vehicles (USVs) are part of the unmanned maritime systems (UMS) market. Although such systems have been in use for decades, in the form of unmanned underwater systems (UUVs), the surface ones have recently started to come at the forefront.

Only a few countries in the world have made them an integral part of their operations, while others have recently started setting up mission specific plans to procure such systems. This new trend will expand to the civilian market with oil & gas, engineering, safety, shipping and other companies procuring such systems to increase their efficiency and economies of scale.

With most of the Earth's surface covered by water, with around 40% of the population living near coastlines, with many energy resources found in the sea and with shipping being the arteries of global commerce, the USV market is a promising one.

Being at its infancy, it offers great opportunities to the countries and companies that seriously commit to enter first and position themselves early on.

Market Forecast gives a detailed analysis of the military Unmanned Surface Vehicles (USV) market in the years 2018 through to 2025 in terms of in service systems and requirements per country, development programs, products available, leading companies and opportunities for manufacturers.

The global USV market is forecasted to grow by 6.0% CAGR with consolidated \$8.698 billion over the 2018-2025 period.
