## Abstracts

The unmanned cargo aircraft market includes autonomous drones (quadcopters), autonomous fixed wing aircraft, and autonomous helicopters that are used to carry cargo payloads.

Air cargo services have been around for over a century. Initially it was used to transport mail and light packages, but it had quickly evolved into the transportation of heavy civilian and military cargo across continents, once large airliners started operating.

The development of the Unmanned Aerial Vehicle (UAV) technologies has expanded their range of applications offering civilian and military users the ability to operate them in cargo transportation roles. This expansion has led to a whole new market of unmanned aerial logistics vehicles called the Unmanned Cargo Aircraft Market, which led to the formation of new companies, predominantly start-ups.

The report "Unmanned Cargo Aircraft - Market and Technology Forecast to 2031" examines, analyses, and predicts the evolution of unmanned cargo aircraft technologies, markets, and outlays (expenditures) over the next nine years – 2023-2031 in the aerospace industry. It also examines unmanned cargo aircraft markets geographically, focusing on the top 95% of global markets, in the Americas, Europe, Asia Pacific, and Middle East & Africa.

Throughout the report we show how unmanned cargo aircraft are used today to add real value, as well as how will they be used in the near and distant future. To provide the most thorough and realistic forecast, this report provides a twin-scenario analysis.
