## Abstracts

### Global Cryptocurrency Market to 2027

#### Summary

Global Cryptocurrency industry profile provides top-line qualitative and quantitative summary information including: market share, market size (value and volume 2017-22, and forecast to 2027). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

#### Key Highlights

Cryptocurrency markets are described as a decentralized (not issued or backed by a central authority such as a government) network-based currency market. Cryptocurrencies can be bought and sold via exchanges and stored in 'wallets'. Unlike traditional currencies, cryptocurrencies exist only as a shared digital record of ownership, stored on a blockchain.

The global cryptocurrency market had a total market capitalization of \$1,145,629.2 million in 2022, representing a compound annual growth rate (CAGR) of 53.2% between 2017 and 2022.

Market consumption volume increased with a CAGR of 102.4% between 2017 and 2022, to reach a total of 43,021.1 billion trading volume USD in 2022.

The bankruptcy of numerous crypto companies eroded public trust in the market, contributing to the collapse of the market.

For instance, the crypto market peaked at \$3 trillion in November 2021, and the value of the overall crypto market plummeted through 2022, hitting a two-year low of \$796 billion as crypto exchange platform FTX imploded.
