SYNOPSIS

Essential resource for top-line data and analysis covering the global tablet sales market. Includes market size data, textual and graphical analysis of market growth trends, leading companies and macroeconomic information.

KEY HIGHLIGHTS

The tablet market consists of the total revenues generated through the sale of tablet computers, such as the Apple iPad or HTC Nexus 9, to end users. The tablet market includes media tablets, but excludes e-readers. The market is

valued at retail selling price (RSP) with any currency conversions calculated using constant 2017 annual average exchange rates.

The global tablet sales market had total revenues of \$46.7bn in 2017, representing a compound annual rate of change (CARC) of -8.2% between 2013 and 2017.

Market consumption volumes declined with a CARC of -3.3% between 2013 and 2017, to reach a total of 165.3 million units in 2017

Contraction in the global tablet sales market was largely due to declining demand and the emergence of cheaper tablets on the market, which resulted in less consumer spending. The longer lifespan of tablets also ensures that they do not need to be replaced at a regular basis. Rather, most consumers now seem to treat tablets as they would TV's - a product that only needs replacing after many years of usage

Semiconductor fabrication companies are looking towards alternatives to silicon in order to move into the next generation of computing

Tablets are available from a wide range of retailers, how consumers wish to pay for them often dictates where they get them from. Telcos are a key distribution channel thanks to tie-in contracts.
