SUMMARY

Energy Consumption in India industry profile provides top-line qualitative and quantitative summary information including: market share, market size (value and volume 2017-21, and forecast to 2026). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The energy consumption sector is defined as the energy consumption by industry, transport, residential, commercial, agricultural, and fishing consumers and markets. Volume is defined as consumption of millions of tonnes of oil equivalent of coal & coal gases (including coal and peat), oil & oil products (including crude oil), natural gas, nuclear, and renewable energy (including hydro, geothermal, solar and biofuel). Value refers to the sum of segments values, as the product of volume and average prices for each type of energy (renewable and nuclear prices estimated from average electricity retailing prices). All market data and forecasts are represented in nominal terms (i.e., without adjustment for inflation) and all currency conversions used in the creation of this report have been calculated using constant 2021 annual average exchange rates.

The Indian energy consumption sector had total revenues of \$228.0 billion in 2021, representing a compound annual growth rate (CAGR) of 9.4% between 2016 and 2021.

The sector's volume increased at a CAGR of 2.5% between 2016 and 2021, to reach a total of 845.6 mtoe in 2021.

The value of the Indian energy consumption sector declined in 2019 and 2020, which reduced energy demand. Primary energy consumption bounced back strongly in 2021.
