exchange rates. Forecast figures presented in this report are calculated using crisis scenarios for the market. The length of the pandemic and restrictions introduced by various countries are still difficult to predict, though many governments had introduced national lockdowns and temporarily banned the sale of products that are deemed 'non-essential'. The length of the pandemic and restrictions imposed by governments around the world is not certain, therefore the impact on this market is difficult to predict. The data used in this report has been modelled on the assumption of a crisis scenario and has taken into consideration forecast impacts on national economies.

The French IT hardware market had total revenues of $30.5bn in 2020, representing a compound annual rate of change (CARC) of -3.7% between 2016 and 2020.

The client computing hardware segment was the market's most lucrative in 2020, with total revenues of $23.7bn, equivalent to 77.7% of the market's overall value.

The overall decline of the market has been driven by oversaturated demand in client computing hardware, especially in laptops and desktop computers.
