Power Generation in Switzerland

SUMMARY

Power Generation in Switzerland industry profile provides top-line qualitative and quantitative summary information including: market size (value and volume 2014-18, and forecast to 2023). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The power generation industry volume is defined as the total electrical energy (TWh) generated within a country over the course of each calendar year.

The Swiss power generation industry had total revenues of \$12.4bn in 2018, representing a compound annual growth rate (CAGR) of 4.5% between 2014 and 2018.

Industry production volumes declined with a CARC of -0.7% between 2014 and 2018, to reach a total of 65.3 TWh in 2018.

The industry experienced a sharp decline of 9.3% in 2017; this was due to declining production volumes as a result of the unscheduled extension of maintenance operations and a power reduction imposed by the ENSI at the Leibstadt nuclear power plant.
