## Abstracts

Power Generation in Japan

### Summary

Power Generation in Japan industry profile provides top-line qualitative and quantitative summary information including: market size (value 2015-19, and forecast to 2024). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

### Key Highlights

The power generation industry volume is defined as the total electrical energy (TWh) generated within a country over the course of each calendar year.

The Japanese Power Generation industry had total revenues of \$210.3bn in 2019, representing a compound annual growth rate (CAGR) of 4.4% between 2015 and 2019.

Industry consumption volumes declined with a CARC of -1.3% between 2015 and 2019, to reach a total of 994.0 TWh in 2019.

The decline of the industry's output after two years of good growth is largely attributable to the decline of the industrial output in that year and the overall anaemic growth of the economy since 2018.
