Power Generation in the Netherlands

SUMMARY

Power Generation in the Netherlands industry profile provides top-line qualitative and quantitative summary information including: market size (value and volume 2014-18, and forecast to 2023). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The power generation industry volume is defined as the total electrical energy (TWh) generated within a country over the course of each calendar year.

The Dutch power generation industry had total revenues of \$17.9bn in 2018, representing a compound annual rate of change (CARC) of -2.8% between 2014 and 2018.

Industry production volume increased with a compound annual growth rate (CAGR) of 1.7% between 2014 and 2018, to reach a total of 109.9 TWh in 2018.

The Dutch power generation industry, like many other European industries, has witnessed a decline in its value as more energy efficient technology reduces electricity consumption levels.
