Renewable Energy in Spain

SUMMARY

Renewable Energy in Spain industry profile provides top-line qualitative and quantitative summary information including: market size (value and volume 2015-19, and forecast to 2024). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The renewable energy market consists of the net generation of electricity through renewable sources. It is divided into four segments, these being hydroelectricity, wind energy, solar and other (biomass, geothermal, tide and wave energy). The volume of the market is calculated as the net volume of electricity produced through renewable means in terawatt hours (TWh), and the market value has been calculated according to an average of annual domestic and industrial retail prices per kWh, inclusive of applicable taxes. Any currency conversions used in the creation of this report have been calculated using constant 2019 annual average exchange rates. Please note that 1 terawatt hour is identical to 1,000 gigawatt hours (GWh). Figures presented in this report are calculated applying the 'middle path' scenario - this is based on the current situation in countries where the epidemic burst first, like China as a model countries and the announcements made by governments, stating that the abnormal situation may last up to six months.

The Spanish renewable energy market had total revenues of \$24.3bn in 2019, representing a compound annual growth rate (CAGR) of 3.4% between 2015

and 2019.

Market consumption volume increased with a CAGR of 1.4% between 2015 and 2019, to reach a total of 102.7 TWh in 2019.

Government incentives for renewable energy projects have been cut in Spain in recent years, forcing the market into steep decline in 2017.
