The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The residential construction market is defined as the value of work put in place annually for residential buildings. Market value is defined in general as the total output value of construction activity in any given time period, including costs related to construction materials, equipment and services for new construction, refurbishment, repair and maintenance and demolition. All market data and forecasts are represented in nominal terms (i.e. without adjustment for inflation) and all currency conversions used in the creation of this report have been calculated using constant 2020 annual average exchange rates.

The Australian residential construction market had total revenues of \$41.9bn in 2020, representing a compound annual rate of change (CARC) of -6.8% between 2016 and 2020.

The new construction segment was the market's most lucrative in 2020, with total revenues of \$29.8bn, equivalent to 71.1% of the market's overall value.

Social-distancing measures and split-shift patterns as a result of the COVID-19 pandemic have limited the number of construction workers allowed onsite at a given time. This has

negatively impacted productivity and construction output over the year, inhibiting overall residential construction market growth in Australia during 2020.
