Residential Construction in Japan

### SUMMARY

Residential Construction in Japan industry profile provides top-line qualitative and quantitative summary information including: market size (value 2015-19, and forecast to 2024). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

### KEY HIGHLIGHTS

The residential construction market is defined as the value of work put in place annually for residential buildings. This includes apartments and apartment blocks, houses, and similar buildings, but not hotels and other forms of commercial, temporary accommodation, and includes both single%li%and multi-family housing. Market value is defined in general as the total value of construction activity in any given time period, including costs related to construction materials, equipment and services, new construction, refurbishment, repair and maintenance and demolition. It is synonymous with measures such as construction value put in place or value of construction work done.

The Japanese residential construction market had total revenues of \$174.4bn in 2019, representing a compound annual growth rate (CAGR) of 0.5% between 2015 and 2019.

Japan's rapidly aging population, which has the potential to cause even worse decline that has been seen in the residential construction market, has been

balanced out by equally rapid urbanization.

Delays to projects and reduced appetite from homebuyers will result in severe decline in 2020.
