Residential Construction in the United States

SUMMARY

Residential Construction in the United States industry profile provides top-line qualitative and quantitative summary information including: market share, market size (value and volume 2015-19, and forecast to 2024). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

KEY HIGHLIGHTS

The residential construction market is defined as the value of work put in place annually for residential buildings. This includes apartments and apartment blocks, houses, and similar buildings, but not hotels and other forms of commercial, temporary accommodation, and includes both single and multi-family housing. Market value is defined in general as the total value of construction activity in any given time period, including costs related to construction materials, equipment and services, new construction, refurbishment, repair and maintenance and demolition. It is synonymous with measures such as construction value put in place or value of construction work done.

The US residential construction market had total revenues of \$648.8bn in 2019, representing a compound annual growth rate (CAGR) of 3.9% between 2015 and 2019.

Some companies including Lennar made a continued push towards the entry-

level market in 2019, citing hopeful improvements to the situation in this market.

The weakness of the public health response in the US will create deep-rooted unemployment that ensures the residential construction market sees a severe trough in demand.
