United States (US) Generics Market Summary, Competitive Analysis and Forecast to 2027

### Summary

Generics in the United States industry profile provides top-line qualitative and quantitative summary information including: market share, market size (value 2017-22, and forecast to 2027). The profile also contains descriptions of the leading players including key financial metrics and analysis of competitive pressures within the market.

### Key Highlights

For the purposes of this profile, a generic drug is defined as a copy of an ethical (prescription) drug formerly protected by patents that have now expired. Both unbranded generics and branded generics are included in our market scope. However, off-patent drugs that continue to be offered by the original manufacturer under the original name, and which form part of the 'generic-eligible' market, are not included. The market value is evaluated at ex-factory prices.

The US generics market had total revenues of \$69.9 billion in 2022, representing a compound annual growth rate (CAGR) of 2.2% between 2017 and 2022.

Market consumption volume increased with a CAGR of 0.3% between 2017 and 2022, to reach a total of 91.4 % in 2022.

9 out of 10 prescriptions written in the United States, according to the FDA, are for generic drugs. Increased access to generic drugs encourages market competition, which lowers the cost of treatment and broadens access to healthcare for more patients.
