Abstracts

The market for feed acids and nutrients is projected to reach \$14.1 Billion by 2019. The estimation is owed to the regular research and developments in the industry with a wide application of the acids and nutrition in the animal feed. Realizing the importance of providing the nutritional feed to animals and their proper growth, the industry is optimistic about the future. The industry has recently diversified its portfolio and has diverted its focus towards small segments such as horse and aqua.

The growing feed industry itself plays the driving force for the market to grow and different applications have the specific requirement, which suits their physical needs. Each type has a different ratio according to the age, size, and living environment of the animal. Currently the market is led by poultry, Asia-Pacific region, and amino acids in the application, region and type segmentation, respectively. China being the leading player has been dominating the market which drives the Asia-Pacific market and gives it a stake of around 30%. The growth rate may grow higher in the next five years as new applications can be determined with regular research and development taking place in the field.

About

Acid and nutrient content in the feed is extremely essential for the proper growth and maintenance of animals. It is an emerging market due to the increase in awareness among customers and growth in developing countries, which increase the value of the market. Although the current scenario depicts a wide range of applications, the major market is focused towards ruminant, poultry, and swine feeds. The aquatic and equine feed depicts a small share; however, it is growing at an exponential rate due to an increase in the awareness. The ruminant feed market has reached a stagnation level and is growing at a slow pace mainly due to the economic development in small countries.

The different types of acids and nutrition included in the study are similar to that of food but in different quantities and ratios. The amino acids & protein segment has dominance over the market size, with the largest share in the market. The regions considered for the study include North America, Europe, Asia-Pacific, and Rest of the World. Amino acids & protein, poultry, and the Asia-Pacific region acquire the largest market share in the category of type, application, and region, respectively.
