## **Abstracts**

“Growth in demand from the personal care industry to drive the market for aerosol valves.”

The global market for aerosol valves is projected to grow from USD 2.71 billion in 2017 to reach USD 3.30 billion by 2022, at an estimated CAGR of 4.03%. The aerosol valves market is driven by factors such as ease-of-use, portability, recyclability, safety & strength, and the increased aesthetic appeal of the aerosol cans. The increasing disposable incomes of the population in developing economies allows them to spend more on personal care products, thereby driving the growth of the aerosol valves industry. However, availability of alternatives is a restraining factor for the aerosol valves.

“The continuous aerosol valves segment accounted for the largest market share in 2016.”

The continuous aerosol valves segment accounted for the largest market share in 2016 in the aerosol valves market. Continuous aerosol valves help to maintain the performance of the spray throughout the lifespan of the aerosol can. These valves are extremely durable and user-friendly and act as a tool for companies to enhance their brands on the retail shelf. This is driving the demand for continuous aerosol valves in the market.

“The Asia Pacific region to gain maximum traction during the forecast period.”

The Asia Pacific region is projected to be the fastest-growing market during the forecast period, followed by South America. In Asia Pacific, China is the largest consumer of aerosol valves, followed by Japan. China, with its growing personal care and healthcare industries, is expected to drive the aerosol valves market. Japan, with its growing inclination toward convenient products, is also expected to drive the aerosol valves market in the Asia Pacific region.
