Abstracts

Artificial intelligence (AI) in marketing market to grow at a CAGR of 29.79% between 2018 and 2025

The AI in marketing market is expected to be valued at USD 6.46 billion in 2018 and is likely to reach USD 40.09 billion by 2025, at a CAGR of 29.79% during the forecast period. Factors such as the growing adoption of customer-centric marketing strategies, increased use of social media for advertising, and increase in demand for virtual assistants are contributing to the growth of the AI in marketing market. For developing, managing, and implementing AI systems, companies require a workforce with certain skill sets. The limited number of AI experts is a major restraint for this market.

Search advertising to hold largest share of AI in marketing market in 2018

Search advertising applications are more sophisticated and deliver near-exact results to the search query. Improved algorithms, which now go beyond keyword matching, are fundamentally driving the growth of search advertising in small and medium-sized enterprises. Moreover, improved software to detect misspellings is further supplementing the growth of AI in search advertising. AI-enabled voice search is also among the fastest-growing applications. Improvements in natural language processing techniques are driving the growth of voice search.

Market for machine learning to grow at highest CAGR between 2018 and 2025

Machine learning holds a major share of the AI in marketing market. This is attributed to enormous availability of data, also called big data, and increasing adoption of ML by enterprises and federal agencies to gain useful insights. Machine learning's ability to collect and handle big data, along with its increased ability to perform previously impossible calculations, is fueling the growth of the market for machine learning.

AI in marketing market in APAC to grow at highest CAGR between 2018 and 2025

China, Japan, South Korea, and India are among the major countries driving the AI in marketing market in APAC. The increasing adoption of deep learning and NLP technologies in finance, agriculture, marketing, and law applications is also driving the market in this region. Growing e-commerce, online streaming, and increasing internet penetration have resulted in the growth of marketing industries. Marketers are now looking for more sophisticated and state-of-the-art marketing solutions for large and ever-growing consumer base. This has resulted in the adoption of AI-enabled solutions for marketing in this region.

North America is expected to be a major contributor to the growth of the AI in marketing market in 2018. The top countries contributing to the AI in marketing market in North America include the US and Canada. The reason for the dominance of these countries is their well-established economies, which allows investments in new technologies to add more value to AI-based solutions.

In the process of determining and verifying the market size for several segments and subsegments gathered through secondary research, extensive primary interviews have been conducted with people holding key positions across regions. The breakup of the profiles of primary participants has been given below.

By Company Type: Tier 1—25%, Tier 2—30%, and Tier 3—45%

By Designation: C-Level Executives—45%, Managers—35%, and Others (Sales, Marketing, and Product Managers)—20%

By Region: North America—50%, Europe—30%, APAC—10%, and RoW—10%

Companies covered in the AI in marketing market report are NVIDIA (US), Intel (US), IBM (US), Micron (US), Samsung Electronics (Korea), Xilinx (US), Amazon (US),

Alphabet (US), Facebook (US), Microsoft (US), Salesforce (US), Baidu (China), Sentient Technologies (US), Albert Technologies (Israel), and Oculus360 (US). Some of the other key companies included in the report are Twitter (US), Oracle (US), InsideSales (US), Persado (US), Mariana (US), Drawbridge (US), Narrative Science (US), Appier (US), GumGum (US), and Zensed (Sweden).

Research Coverage

The AI in marketing market has been segmented on the basis of offerings, deployment types, applications, technologies, end-user industries, and regions. The market has been segmented on the basis of offerings into hardware, software, and services. The market, based on deployment types, has been segmented into cloud and on premises. On the basis of technologies, the market has been segmented into machine learning, context-aware computing, natural language processing, and computer vision. The market has been segmented on the basis of applications into social media advertising, search advertising, dynamic pricing, virtual assistant, content curation, sales & marketing automation, and analytics platform, among others. The market has been segmented on the basis of end-user industries into BFSI, retail, consumer goods, media & entertainment, enterprise, and others (healthcare, manufacturing, education, and automotive).

Reasons to Buy the Report

1. This report segments the AI in marketing market comprehensively and provides the closest approximation of the size of the overall market and its subsegments for various applications across regions.
2. The report helps stakeholders understand the pulse of the market and provides them with information on key market drivers, restraints, challenges, and opportunities pertaining to the market.

Contents

1 INTRODUCTION

- 1.1 STUDY OBJECTIVES
- 1.2 DEFINITION
- 1.3 STUDY SCOPE
 - 1.3.1 MARKETS COVERED
 - 1.3.2 YEARS CONSIDERED FOR THIS STUDY
- 1.4 CURRENCY
- 1.5 LIMITATIONS
- 1.6 STAKEHOLDERS

2 RESEARCH METHODOLOGY

- 2.1 RESEARCH DATA
 - 2.1.1 SECONDARY DATA
 - 2.1.1.1 Key data from secondary sources
 - 2.1.2 PRIMARY DATA
 - 2.1.2.1 Key data from primary sources
 - 2.1.2.2 Key industry insights
 - 2.1.2.3 Breakdown of primaries
- 2.2 MARKET SIZE ESTIMATION
 - 2.2.1 BOTTOM-UP APPROACH
 - 2.2.2 TOP-DOWN APPROACH
- 2.3 MARKET BREAKDOWN & DATA TRIANGULATION

Narrative Science (US)

Appier (US)

GumGum (US)

Zensed (Sweden)

Software to hold largest share of AI in marketing market by 2025

Software holds a major share of the overall AI in marketing market owing to the developments in AI software and related software development kits. AI systems require different types of software, including application program interfaces, such as language, speech, vision, and sensor data, along with machine learning algorithms, to realize various applications for sales and marketing. Software platforms and solutions are available at high costs as there are limited number of experts that develop machine learning algorithms.

Market for cloud deployment to grow at higher CAGR between 2018 and 2025

Several businesses have already moved part of their operations to the cloud, which has encouraged vendors to develop cloud-based solutions. Migrating to the cloud has benefits such as enhanced flexibility, control, and scalability. Cloud deployment significantly reduces the capital investment required to implement AI-based solutions for marketing and sales; this is one of the major reasons for the increased demand for cloud-based solutions from most enterprises.

North America to hold major share of AI in marketing market in 2018

North America is expected to account for the largest share of the overall AI in marketing market in 2018. North America is the largest contributor to the adoption and implementation of AI in marketing. The region, including the US and Canada, has shown increased investments in the market, and several vendors have evolved to cater to the rapidly growing market. Considerable growth is expected in the region during the forecast period owing to the growing adoption of AI among physically present retail stores, as well as the ongoing research and pilot projects by North American companies.
