Abstracts

The global collagen & gelatin market is projected to reach USD 1,671.3 million in 2030 from USD 1,295.5 million in 2025, growing at a CAGR of 5.8% during the forecast period. The rising incidence of diabetes, cancer, and cardiovascular diseases increased the demand for efficient treatment, particularly products with advanced wound care. Collagen dressings are becoming popular because they can rapidly heal wounds and minimize infection risk. Moreover, the hike in surgeries has spurred demand for collagen-based biomaterials for sutures, scaffolds, and implants.

Additionally, the expanding uses of collagen in tissue engineering and regenerative medicine, specifically in developing bioengineered skin, cartilage, and bone, are creating new avenues for therapeutic use.

“The collagen segment held the largest share in the product type market during the forecast period”

In 2024, collagen held the largest market within the collagen & gelatin market by product type. The rising adoption of regenerative medicine, orthopedic implants, and dermatological therapies, where native and type-specific collagen plays a critical role in tissue scaffolding and repair. Further, the innovation of recombinant collagen technology and marine-based sources is pushing the boundaries of application into next-generation areas of cell therapy, 3D printing, and custom medicine, thus solidifying it as one of the key material players in the next-generation approach to healthcare solutions.

“The hospital end user segment is projected to hold the largest market share during the forecast period”

Collagen & gelatin products are mainly consumed by the hospital industry. Hospitals are also the central focal points for healing chronic wounds, burns, diabetes ulcers, and postoperative care, wherein dressings made from collagen find extensive use on account of the well-established efficacy of the product for inducing tissue regrowth and recovery at a faster pace. Moreover, hospitals are always on the edge when using next-generation medical devices, regenerative medicines, orthopedic implants, and drug-delivery systems that heavily utilize collagen-based products.

“Asia Pacific is projected to be the fastest-growing region during the forecast period”

The Asia Pacific collagen & gelatin market is projected to register the highest growth rate during the forecast period, attributed to the rapidly expanding biopharmaceutical manufacturing capabilities and increasing investment in regenerative medicine and advanced drug delivery systems. China, India, South Korea, and Japan are upscaling their priority in R&D on collagen-based scaffolds, cell therapies, and tissue engineering, driven by substantial financing and academia-industry linkages.

Also, an increase in clinical trials and contract manufacturing organizations (CROs and CMOs), which are embracing collagen and gelatin as key substances in drug encapsulation, wound healing formulations, and 3D bioprinting technologies, is another primary driver driving the region's highest growth over the forecast period.
