## **Abstracts**

The context rich system market is expected to grow at a CAGR of 17.39% between 2015 and 2020. The major reason for the growth in context rich systems is their growing applications in the e-commerce and marketing vertical. The advancements in context rich system applications, such as combination of ubiquitous and mobile computing technologies have increased the scope of the context rich system market for large applications in different sectors.

Applications in smartphones hold a large share of this market

Applications in smartphones lead the market since smartphones work as context rich systems using their sensors for sensing data and responding accordingly to users. The use of high-quality sensors in smartphones makes it more flexible for handling sophisticated mobile sensing tasks, mainly gesture sensing. Also, context rich system applications in smartphones are used for navigation and providing location-based services according to a user's requirements. These factors would facilitate the growth of smartphone-based context rich system applications at a high CAGR.
