Growing demand for energy-efficient cooling solutions along with the increasing need for compact and noise-free solutions to drive the adoption of data center liquid cooling solutions and services

The global data center liquid cooling market is expected to grow from USD 1.2 billion in 2019 to USD 3.2 billion by 2024, at a Compound Annual Growth Rate (CAGR) of 22.6% during the forecast period. Major factors driving the growth of the data center liquid cooling market include increasing need for energy-efficient cooling solutions, growing demand for compact and noise-free solutions, need for lower operating costs, and need for better overclocking potential.

Based on solutions, direct liquid cooling solutions segment to grow at the higher CAGR during the forecast period”

Direct Liquid cooling involves the direct immersion of data center servers into special sealed containers filled with fluids that are non-corrosive and non-toxic. Direct cooling solutions are anticipated to experience good growth opportunities in warmer regions of the world, such as APAC and MEA. Single-phase direct cooling solutions are cheaper to set up, but they tend to reduce the server lifespan. These solutions are, therefore, gaining popularity among data center vendors that utilize servers for a shorter time span.

Based on enterprises, the BFSI segment to hold the highest market share in 2019 in the data center liquid cooling market

The data centers in BFSI are characterized by larger server densities that generate high amounts of heat and require powerful cooling infrastructure. Moreover, with increasing budget constraints, cost-effective infrastructure solutions are becoming essential in the BFSI industry. Thus, this industry focuses on lowering energy consumption by installing advanced data center cooling and innovative building management tools. Data center cooling solutions are increasingly gaining traction in this sector, globally; this can be attributed to their capacity to provide reliable and efficient high performance cooling to large data center facilities.

Based on regions, data center liquid cooling market in Europe to grow at the highest CAGR during the forecast period

The high growth of the market in Europe is attributed to the large number of colocation facilities in the region and the increasing adoption of indirect liquid cooling solutions. Data center colocation providers are increasingly adopting liquid cooling due significant benefits in reducing energy consumption. Moreover, rising green data center initiatives are propelling the demand for direct liquid cooling solutions across the region.

Further, in-depth interviews were conducted with the Chief Executive Officers (CEOs), Chief Marketing Officers (CMO), Vice Presidents (VPs), Managing Directors (MDs), technology and innovation directors, and related key executives from various key companies and organizations operating in the data center liquid cooling market.
