Abstracts

Rising demand for precision weapon systems, advancements in automatic weapon systems, and ongoing military modernization programs worldwide are expected to fuel the growth of the fire control system market.

The fire control system market is projected to grow from USD 5.9 billion in 2018 to USD 7.3 billion by 2023, at a CAGR of 4.37% from 2018 to 2023. Some of the factors that are expected to fuel the growth of the fire control system market are the demand for integrated weapon systems, advanced gun systems, and trajectory correction systems, among others. Various defense manufacturing companies have been focusing on developing automated fire control systems.

The target acquisition & guidance systems segment is estimated to account for the largest share of the fire control system market in 2018 due to the increasing demand for military spending in various emerging economies

Based on system, the target acquisition & guidance systems segment is estimated to account for the largest share of the fire control system market in 2018. Target acquisition & guidance plays a key role in the operation of weapon systems with the help of fire control radar, EO/IR, gun director, in targeting and guiding weapons to hit targets. These are used in all 3 platforms, land, airborne, and naval.

The medium range (9 to 80 km) segment is estimated to account for the largest share of the fire control system market in 2018

Based on range, the medium range (9 to 80 km) segment is estimated to account for the largest share of the fire control system market in 2018. The medium range is highly preferred by militaries, as it provides greater accuracy in targeting compared to a long range system, and provides greater range coverage than a short range system. Countries such as India and Ukraine are currently investing in medium-range defense systems.

The land segment is estimated to account for the largest share of the fire control system market in 2018

Based on platform, the land segment is estimated to account for the largest share of the fire control system market in 2018. Rise in the use of automatic weapons is strengthening the defense capabilities of land platforms and providing greater safety to soldiers during war and anti-terrorist operations. Developed countries are focusing on installing remote weapons stations on various land warfare platforms, which are expected to help in reducing the number of casualties during anti-terrorist operations.

North America is estimated to account for the largest share of the fire control system market in 2018

North America is expected to account for the largest share of the fire control system market in 2018, owing to the high demand for fire control systems from the US Department of Defense. Various US defense players, such as General Dynamics Corporation, Lockheed Martin, Northrop Grumman, are manufacturing advanced remote weapon stations with integrated fire control systems. Additionally, these defense giants are focusing on improving the accuracy of weapons, and the time taken to lock on to a target and make necessary adjustments.
