Abstracts

The global district heating market is expected to be valued at USD 191.5 billion in 2023 and is projected to reach USD 242.1 billion by 2028; it is expected to grow at a CAGR of 4.8% from 2023 to 2028. The increasing trends of urbanization and industrialization are propelling an increased need for energy across various sectors, particularly in densely populated urban centers and industrial hubs. District heating systems emerge as a fitting solution for these areas, characterized by a concentration of buildings requiring heating and a substantial demand for heat in industrial operations. This centralized approach not only ensures dependable heating services but also contributes significantly to the reduction of pollution and overall energy consumption. Urbanization stands out as a prominent global megatrend, with ongoing urban development driving a heightened demand for district heating. The shift in population from rural to urban areas has resulted in a notable increase in public expenditures. This demographic shift has, in turn, spurred a consistent rise in the demand for heating, prompting substantial investments in the district heating sector. The growth of urban areas facilitates organized infrastructure development, creating a conducive environment for the implementation of district heating solutions.

“Renewables heat sources are growing at highest CAGR in district heating market”

The renewables segment in the district heating market, encompassing sources such as geothermal, biomass & biofuel, and others like solar and wind, is experiencing the highest CAGR due to an escalating global emphasis on sustainable and eco-friendly

energy solutions. As concerns about climate change intensify, there is a growing recognition of the environmental benefits offered by renewable energy sources. Governments and industries worldwide are increasingly investing in technologies that harness the power of nature, promoting the integration of renewable energy into district heating systems. The inherent advantages of renewables, including their ability to reduce carbon emissions, enhance energy security, and provide a reliable and consistent heat supply, are driving this segment's rapid growth. Additionally, advancements in renewable energy technologies, coupled with supportive policies and incentives, further contribute to the revenue growth observed in the renewables segment within the district heating market.

“Boiler plants accounts for second-largest share in district heating market”

Boiler plants secure the second-largest share in the district heating market by plant type due to their widespread adoption and versatility in providing cost-effective and efficient heat generation. Boilers are established and well-understood technologies with the capability to use various heat sources, including fossil fuels and biomass. Their adaptability makes them suitable for diverse applications in district heating systems, accommodating different scales of operation. Boiler plants offer a reliable and controllable means of producing heat, meeting the demands of both residential and industrial consumers. The familiarity, affordability, and proven performance of boiler plants contribute to their prominent market position, making them a preferred choice for district heating solutions globally.

“Europe holds largest market share in district heating market.”

Europe dominates the district heating market by region, claiming the largest share, primarily due to a combination of historical infrastructure development, stringent environmental regulations, and a commitment to sustainable energy practices. Many European countries have a long-standing tradition of district heating systems, dating back decades, which has laid a robust foundation for their widespread adoption. Additionally, the region's proactive approach to combatting climate change has driven a shift towards cleaner and more efficient heating solutions. Stringent emissions standards and ambitious renewable energy targets have incentivized the expansion and modernization of district heating networks, utilizing a mix of renewable and waste heat sources. The European region's commitment to reducing carbon emissions and enhancing energy efficiency, coupled with a well-established district heating infrastructure, positions it as a leader in the global market.

The study contains insights from various industry experts, ranging from component suppliers to Tier 1 companies and OEMs. The break-up of the primaries is as follows:

By Company Type: Tier 1 – 10%, Tier 2 – 20%, and Tier 3 – 70%

By Designation: C-level Executives – 40%, Directors – 30%, and Others – 30%

By Region: Americas – 40%, Europe – 40%, Asia Pacific – 20%

The key players operating in the district heating market are Fortum (Finland), Vattenfall (Sweden), ENGIE (France), Danfoss (Denmark), Statkraft (Norway) among others.

Research Coverage:

The research reports the District Heating Market, By Heat Source (Coal, Natural Gas, Renewables (Geothermal, Biomass & Biofuel, and Others), Oil & Petroleum Products, Others), By Plant Type (Boiler Plants, Combined Heat and Power, and Others), Application (Residential, Commercial, and Industrial), and Region (Americas, Europe, and Asia Pacific). The scope of the report covers detailed information regarding the major factors, such as drivers, restraints, challenges, and opportunities, influencing the growth of the district heating market. A detailed analysis of the key industry players has been done to provide insights into their business overviews, products, key strategies, Contracts, partnerships, and agreements. New product & service launches, mergers and acquisitions, and recent developments associated with the district heating market. Competitive analysis of upcoming startups in the district heating market ecosystem is covered in this report.

Key Benefits of Buying the Report

Analysis of key drivers (Rising focus on energy-efficient and cost-effective heating systems

Rapid growth in urbanization and industrialization propelling demand for sustainable heating services, Increasing shift towards renewable sources in district heating, Lower operating costs as compared with in-building heating systems, Increasing policy initiatives by governments and associations, Carbon tax and emissions reduction driving adoption of district heating solutions), restraints (High investment costs of district heating infrastructure, Unsuitability of

large district heating network for small heat loads, and Regulatory and permitting hurdles), opportunities (Increasing focus on waste heat recovery for district heating, Rising number of initiatives related to clean energy production, Integration of multiple energy sources in heat generation, and Digitalization in district heating networks), and challenges (Necessity of robust transportation infrastructure and equipment, Load prediction and better utilization challenges of heating systems, and Limited availability of district heating networks in waste heat recovery) influencing the growth of the district heating market.

Product Development/Innovation: Detailed insights on upcoming technologies, research & development activities, and new product launches in the district heating market

Market Development: Comprehensive information about lucrative markets – the report analyses the district heating market across varied regions.

Market Diversification: Exhaustive information about new products/services, untapped geographies, recent developments, and investments in the district heating market

Competitive Assessment: In-depth assessment of market shares, growth strategies, and service offerings of leading players like Fortum (Finland), Vattenfall (Sweden), ENGIE (France), Danfoss (Denmark), Statkraft (Norway), among others in the district heating market.

5 MARKET OVERVIEW

5.1 INTRODUCTION

5.2 MARKET DYNAMICS

FIGURE 17 DISTRICT HEATING MARKET: DRIVERS, RESTRAINTS, OPPORTUNITIES, AND CHALLENGES

5.2.1 DRIVERS

FIGURE 18 DISTRICT HEATING MARKET: IMPACT ANALYSIS OF DRIVERS

5.2.1.1 High demand for energy-efficient and cost-effective heating systems

5.2.1.2 Rapid urbanization and industrialization

5.2.1.3 Increased use of renewable sources to run district heating systems

5.2.1.4 Relatively low operating costs of district heating systems than in-building heating systems

5.2.1.5 Government-led incentives and subsidies offered for low-carbon technology-based products

5.2.1.6 Enforcement of carbon tax on fossil fuel-powered heating solutions

5.2.2 RESTRAINTS

FIGURE 19 DISTRICT HEATING MARKET: IMPACT ANALYSIS OF RESTRAINTS

5.2.2.1 Need for high initial investment

5.2.2.2 Barriers to district heating network deployment in small-scale projects

5.2.2.3 Time-consuming and complex regulatory approval processes

5.2.3 OPPORTUNITIES

FIGURE 20 DISTRICT HEATING MARKET: IMPACT ANALYSIS OF OPPORTUNITIES

5.2.3.1 Increasing focus on waste heat recovery for district heating

5.2.3.2 Enforcement of policies boosting renewable energy production

5.2.3.3 Integration of multiple energy sources in heat generation

5.2.3.4 Utilization of digital technology in district heating networks

5.2.4 CHALLENGES

FIGURE 21 DISTRICT HEATING MARKET: IMPACT ANALYSIS OF CHALLENGES

5.2.4.1 Requirement for smart meters to prevent heat loss during heat distribution process

5.2.4.2 Need for precise load planning and better utilization of heating systems

5.2.4.3 Limited number of district heating networks to harness waste heat

5.3 VALUE CHAIN ANALYSIS

6 COMPONENTS OF DISTRICT HEATING PRODUCTS

6.1 INTRODUCTION

6.2 BOILERS

6.2.1 ABILITY TO CONVERT HEAT SOURCES INTO USABLE THERMAL ENERGY TO BOOST DEMAND

6.3 INSULATED PIPELINES

6.3.1 REDUCED ENERGY WASTAGE AND MINIMIZED HEAT LOSSES DURING TRANSIT TO FUEL MARKET GROWTH

6.4 HEAT PUMPS

6.4.1 ABILITY TO UTILIZE LOW-GRADE HEAT SOURCES TO DRIVE DEMAND

6.4.2 AIR-TO-AIR HEAT PUMPS

6.4.2.1 Potential energy-efficient alternative to traditional heating systems to accelerate demand

6.4.3 AIR-TO-WATER HEAT PUMPS

6.4.3.1 Ability to exhibit high performance in cold climates to support market growth

6.4.4 WATER SOURCE HEAT PUMPS

6.4.4.1 Significant contribution to reduced energy consumption and environmental impact to drive market

6.4.5 GEOTHERMAL HEAT PUMPS

6.4.5.1 Ongoing advancements in geothermal heat pump technology to boost demand

6.4.6 HYBRID HEAT PUMPS

6.4.6.1 Enhanced system resilience and optimized energy utilization to drive market

6.5 HEAT EXCHANGERS

6.5.1 OPTIMIZED ENERGY EXCHANGE PROCESS AND ENHANCED OVERALL SYSTEM PERFORMANCE TO FOSTER SEGMENTAL GROWTH

6.6 HEAT METERS

6.6.1 ADOPTION OF SMART METERING TECHNOLOGIES TO OFFER LUCRATIVE GROWTH OPPORTUNITIES TO PLAYERS

7 DISTRICT HEATING MARKET, BY HEAT SOURCE
