“The global geospatial solutions market is projected to grow at a CAGR of 13.2% from 2019 to 2024”

The global geospatial solutions market is projected to reach USD 502.6 billion by 2024 from an estimated USD 239.1 billion in 2019, at a CAGR of 13.2% during the forecast period. This growth can be attributed to factors such as development of 4D GIS software and GIS industry using new and upcoming technologies like 3D, Augmented Reality (AR), and Virtual Reality (VR).

“The earth observation segment is expected to be the largest market, by technology, during the forecast period”

The earth observation segment is expected to be the largest market, by technology, during the forecast period. Earth observation uses satellite imagery to make several key decisions, especially in the defense & intelligence sector, is taken. The components used in earth observation are of significant importance and value. The investments made are also significantly high. All this eventually leads to the development of this segment.

Geovisualization is expected to be the fastest growing segment of the geospatial

solutions market, by application, during the forecast period

Geovisualization emphasizes knowledge construction over knowledge storage or information transmission. For this, geovisualization communicates geospatial information in ways that, when combined with human understanding, allow data exploration and decision-making processes. Thus, this application is of extreme importance in mapping and surveying. With the growth in the usage of geospatial solutions, this application is expected to be extensively used during the forecast period.

“North America: The largest geospatial solutions market”

North America is projected to be the largest geospatial solutions market by 2024. The US, Canada, and Mexico are among the major countries that are the leading users of geospatial technologies and are implementing these technologies into mainstream applications. Over the past few years, this region has witnessed rapid economic development. Also, the growth of automation in this region increased the adoption of geospatial technologies in several industries, which, in turn, drives the growth of the geospatial solutions market.
