Abstracts

Specialty chemicals are used to enhance product performance across various industries, including electronics, plastics, and automotives. These chemicals such as fluorocarbon and cellulosic fibers were first used in the textile industry to enhance softness and stain resisting properties of the fabric. Since then, specialty chemicals were developed for applications in almost all industries. The report analyses and provides market forecasts and estimates for specialty chemicals based on two segments; target applications and functions and covers all major chemicals based on target applications such as advanced ceramic materials, construction chemicals, electronic chemicals, cosmetic chemicals, food additives, pesticides, nutraceuticals agents, printing inks, rubber processing chemicals, textile chemicals and water management chemicals and all major chemicals based on functions, such as adhesives and sealants, antioxidants, biocides, catalysts, corrosion inhibitors, separation membranes, specialty coatings, specialty surfactants, synthetic dyes and water soluble polymers. The report also identifies and analyses market trends, drivers, inhibitors and opportunities in the specialty chemicals market.

The stakeholders of the market will be benefited by key opportunities identified and analyzed in the report. Also, the key players, their developments and strategies have been analyzed and explained in the report.
