“Surging demand for enhancing customer experience and carrying out real-time patient health and asset monitoring, remotely, is expected to act as a growth opportunity for the Hadoop big data analytics market.”

The global Hadoop big data analytics market size to grow from USD 12.8 billion in 2020 to USD 23.5 billion by 2025, at a Compound Annual Growth Rate (CAGR) of 13.0% during the forecast period. Various factors such as the growing focus on digital transformation, rise in investments in analytics, increasing focus on remote monitoring in support of the COVID-19 pandemic, growing adoption of smart payment technologies, and business need to build a digital infrastructure for large-scale deployments are expected to drive the adoption of Hadoop big data analytics market. The objective of the report is to define, describe, and forecast the Hadoop big data analytics market size based on component, organization size, deployment mode, business function, vertical, and region.

The COVID-19 outbreak has affected all markets, as well as the behaviors of customers. It has a substantial impact on economies and societies. With offices, educational institutions, and manufacturing facilities being shut down for an indefinite period, major sports and events being postponed, and work-from-home and social distancing policies being implemented globally, businesses are increasingly making efforts to deploy technologies that assist them through this difficult time. Analytics professionals, BI professionals, and advanced analytics experts have been called to

help executives drive business decisions to respond to new challenges posed by the COVID-19 spread. Hadoop big data analytics companies are witnessing a slowdown in their growth, owing to the lockdowns imposed worldwide.

Healthcare and life sciences and BFSI verticals have been least impacted by the COVID-19 and are continuing the adoption of Hadoop big data analytics solutions. The competition among key Hadoop big data analytics companies is expected to intensify as most upcoming analytics projects have been put on hold owing to the pandemic. Businesses have already started making efforts to return to the normal and are facing multiple challenges at customer and operational levels. New practices, such as work-from-home and social distancing, have led to the requirement of remote health monitoring of patients and assets and smart payment technologies, as well as the development of digital infrastructures for large-scale technology deployments.

The services segment to grow at a higher CAGR during the forecast period

The Hadoop big data analytics market is segmented on the basis of components, such as solutions and services. The services segment is expected to grow at a rapid pace during the forecast period. The demand for professional services, such as deployment and integration, support and maintenance, and consulting, is rising with tailor-made features for Hadoop big data analytics solutions during the COVID-19 outbreak.

The operations segment to grow at the highest CAGR during the forecast period

The Hadoop big data analytics market by business function has been segmented into marketing and sales, operations, finance, and human resources. The operations segment is expected to witness rapid growth in the adoption of Hadoop big data analytics solutions, as businesses are leveraging these solutions to enhance internal processes and optimize operations.

The healthcare and life sciences segment to grow at the highest CAGR during the forecast period

The Hadoop big data analytics market by industry vertical has been segmented into BFSI, transportation and logistics, retail and eCommerce, manufacturing, telecommunications and IT, healthcare and life sciences, government and public sector, media and entertainment, travel and hospitality, and others (energy and utilities, education and research, and real estate). Healthcare and life sciences vertical is expected to register the highest CAGR during the forecast period as healthcare and life

science organizations have been adopting pandemic analytics to help researchers interpret the pandemic during the COVID-19 crisis. Pandemic analytics integrated with AI technology helps medical researchers in drug discovery in minimum time.

Among regions, Asia Pacific (APAC) to grow at the highest CAGR during the forecast period

APAC is expected to grow at the highest CAGR during the forecast period. The increasing investments by the tech companies in major APAC countries, such as China, and Japan, increasing government regulations and initiatives are expected to drive the growth of the market in APAC.
