Abstracts

In today's business environment, organizations strive to meet the constantly changing global business dynamics. Most of the organizations view IT as a tool to be agile and to have a sustainable business success. At the same time, rising IT costs have become a major concern and cost cutting is the current business objective of corporations. Public cloud services have revolutionized the IT industry and have encouraged organizations of all sizes to implement advanced technologies in computing at lesser cost. However, enterprises migrated to private cloud due to security/privacy issue and loss of control over data. Besides, cloud providers have stepped forward and have implemented a hybrid cloud solution which combines the benefits of two or more of the clouds and to mitigate the security/ privacy concerns.

The Global report provides a detailed research study which exhibits the issues around the cloud selection and how companies leverage the composition of two or more clouds to support cloud bursting at peak times. Major players such as, Hewlett- Packard, IBM, Amazon, Dell, Rackspace Inc, Intel, Equinix and others are profiled in the report. The report also provides the market trends, market dynamics, technology road maps, opportunity plots, regional and competitive analysis of the market.
