## **Abstracts**

IVA is an integral component of intelligent video management solution for security and business intelligence solutions. Intelligent Video Analytics is projected to be the fastest growing technology segments of the Surveillance (IT) sector in the next three to five years, with significant potential investments from companies to secure their computing environment.

Intelligent Video Analytics provides an advanced solution that performs intelligent video analysis and fully automates video monitoring. It automatically tracks and identifies objects, analyzes motion and extracts video intelligence from analog, digital, or IP video streams. These analytics can output real-time events and object data for video data mining or storage in a database. Today's Video Analytics software is easy to use and offers growing functionality. Furthermore, Video Analytics can be integrated with other security and information systems to create new possibilities for using and managing video data.

Intelligent Video Analytics software can probably be layered onto your existing surveillance system, so adding the capability is an incremental enhancement, not a new installation. Packaged applications are available for reporting, alerting, and other "dashboard" capabilities.

Intelligent Video Analytics (IVA) market in 2011 was worth \$180.0 million, and is expected to grow \$867.8 million by 2017. It is expected to have an increasing CAGR of 30.4% from 2012 to 2017. Latin America and Middle East & Africa regions are emerging

market, whereas in Europe, APAC, and North America regions considered a high growth in the markets. In 2011, Europe accounted for about 35.3% of the global revenue, and is expected to grow at a CAGR of 28.6% from 2012 to 2017. APAC and North America are estimated to contribute \$182.7 million and \$184.0 million, respectively, by 2017; at a CAGR of 33.6% and 29.1%, from 2012 to 2017.
