“The need for inbuilt light sensors in the automotive sector for driver assistance and safety would drive the growth of the light sensors market”

The global light sensors market is estimated to grow at a CAGR of 9.3% between 2016 and 2022 and is expected to reach USD 2.14 billion by 2022. The driving factors for the light sensors market are the growing implementation of light sensors for performing the functions in consumer electronic products such as smartphones and tablets. Also, advancements in the automotive sector, smart homes, and outdoor lighting are expected to boost the growth of the light sensors market.

“Automotive applications to gain maximum traction during the forecast period”

The automotive and consumer electronics application areas offer a huge growth potential for light sensors. These two applications collectively accounted for a market share of ~50% in 2015. The growing demand from OEMs to implement light sensors for certain functions to perform such as ambient light sensing, proximity detection, RGB color sensing, and gesture recognition in mobile devices and tablets has supported the growth of the consumer electronics sector of the light sensors market. The growth of the automotive market is attributed by the growing concern for driver assistance and safety. The light sensor functions such as gesture recognition, ambient light sensing, and proximity detection are expected to drive advances in the automotive infotainment segment. These sensors are helping the driver from getting distracted while driving on

the road.
