Increasing demand for Maritime transportation to drive the Marine lighting market

The marine lighting market is projected to grow to USD 495 million by 2027 from USD 328 million in 2019, at a CAGR of 5.3% during the forecast period. The increasing demand for lighting is driven mainly by the growing usage of LEDs, and the stringent regulations for the marine industry, increasing demand for luxury yachts, and increasing shipping activities across the globe.

Passenger ships are the fastest growing marine lighting market, by ship type

Passenger ships are projected to be the fastest-growing segment of the marine lighting market by 2027. The demand for passenger ships is increasing in Europe and Asia Pacific regions due to the increasing consumer preference for luxury cruises. This has led to an overall increase in the demand for decorative lighting in the shipping industry. Commercial ships are the second-fastest-growing marine lighting market owing to increasing trade worldwide.

LEDs are the largest technology segment of the marine lighting market

LEDs are estimated to hold the largest share of the marine lighting market, by

technology. Light-emitting diode (LED) lamps have a lifespan and electrical efficiency superior to that of both, halogen and xenon lamps. Shipyards all over the world are switching to LED lights as not only are they energy efficient but also provide better luminosity. They are being used in passenger ships, commercial ships, and yachts. Hence, LEDs are projected to be the largest segment by technology.

North-America to be the fastest-growing market for marine lighting, whereas Asia Pacific is the largest

North America is the fastest-growing region in the marine lighting market owing to the increasing passenger ships and yachts registration. The demand for commercial ships has increased as the US is focusing on its domestic manufacturing industry.

Asia Pacific, on the other hand, is the largest manufacturing hub in the world. China, Japan, and Indonesia account for the largest demand for ships in the region. India is the fastest-growing country in terms of the usage of marine lighting in the Asia Pacific region. Factors such as low production cost, abundant availability of raw materials, and safety norms have made this the largest region in the marine lighting market.
