Mechanical Control Cables Market for Military and Aerospace, by Application (Aerial, Land, and Marine), Type (Push-pull, Pull-pull), Platform, Material, End-Use (Commercial, Defense, Non-Aero Military), and Region - Global Forecast to 2025

Increasing air passenger traffic and demand for commercial aircraft drives the global mechanical control cables market for military and aerospace

The global mechanical control cables market for military and aerospace is anticipated to grow from USD 8.8 billion in 2019 to USD 11.9 billion by 2025, at a CAGR of 5.1% during the forecast period. The ever-growing passenger traffic and rising expenditure by defense authorities are expected to drive the mechanical control cables industry for military and aerospace.

Based on material, the jacket material segment is projected to grow with higher CAGR during the forecast period

Based on material, the jacket material segment is expected to grow with a higher CAGR across the forecast period. Jackets are the outermost layer of wire. Without a jacket, cables are susceptible to abrasion, heat and oxidation damages, as well as weather-related damages. Jacket materials are categorized into thermoplastic and thermoset.

Based on type, the push-pull segment is projected to grow at the highest CAGR in the mechanical control cables market for military and aerospace over the forecast period

Push-pull control cables and rods are mechanical devices that are used in applications which actuate the predefined motion, i.e., forward and backward motion in a particular

direction. Such cables are used primarily in the flight control and landing gear systems of an aircraft. The increasing demand for commercial air travel, especially from emerging economies of Asia Pacific, is fueling the demand for new commercial aircraft. According to Boeing and Airbus forecast outlook, the world will require 39,620 and 33,070 new aircraft by 2035.

North America is projected to grow at the highest CAGR across the forecast period. According to the World Bank, the North American region contributes up to 28% (approximately) of the world's GDP. North America is also considered as a key region for maritime activities, and the growth of coastal shipping in this region is also propelling the demand for military ships. The US also procured 49,099 vehicles for its army and over 6,000 vehicles for its naval force in 2018. In June 2018, the US Army awarded a contract worth USD 258 million to General Dynamics Land Systems to modify 116 Stryker vehicles. Such modernizations will drive the market for mechanical components, such as mechanical control cables. Major companies providing mechanical control cables are Triumph Group (US), Crane Aerospace & Electronics (US), and Elliott Manufacturing (US).
