## **Abstracts**

“Increasing complexity of electrical-electronic architecture in modern vehicles.”

The global multi domain controller market is projected to grow at a CAGR of 25.7% during the forecast period, from USD 1.3 billion in 2018 to USD 20.2 billion by 2030. The growing number of connected cars and electronic content per vehicle, and reinforcement of mandates by regulatory bodies for vehicle safety and comfort are driving the multi domain controller market. The growing number of ECUs in vehicles increases the complexity of electrical and electronics architecture. Also, 100 million lines of codes are currently used in a car’s software. In such a situation, the multi domain controllers play a major role in reducing the complexity and the overall price and weight of the vehicle.

“ADAS & Safety segment to grow at a significant rate during the forecast period.”

The ADAS & Safety segment of the multi domain controller market is projected to grow at the highest CAGR during the forecast period. Developing countries such as China, Brazil, and India are currently formulating mandates for passenger safety in vehicles. These circumstances and social awareness have ensured the quick growth of the ADAS market. As these features keep growing with time, multi domain controllers will witness a lightning-fast growth for this application.

“The ICE Vehicle segment is estimated to be the largest growing multi domain

controller market, in terms of value.”

An internal combustion engine vehicle is the most predominant vehicle technology in the global automotive market. The ICE vehicle segment accounts for the largest share of the multi domain controller market, by propulsion. While developed countries such as the US, Japan, and Germany are promoting the use of non-conventional vehicles, emerging nations such as China and India still account for the highest demand for conventional vehicles. Therefore, the demand for ICE vehicles is increasing in countries such as China, India, South Africa, and Brazil. The multi domain controller market for ICE vehicles is, thus, expected to grow during the forecast period.

“North America is estimated to be the fastest growing region in the multi domain controller market during the forecast period.”

The North American region is estimated to grow at the highest CAGR in the multi domain controller market during the forecast period. The North American automotive industry is one of the most advanced industries in the world. It houses major OEMs such as Ford Motor, General Motors, and Fiat-Chrysler Automotive. The North American Free Trade Agreement (NAFTA) has fostered the growth of the automotive industry in the region. The US, which has traditionally been a global technological leader, is the largest automotive market in North America. The large customer base and the high levels of disposable income fuel the demand for vehicles in the country, resulting in increasing manufacturing activities by local automotive OEMs. Due to this, the multi domain controller market is expected to gain more popularity in the region.

The study contains insights from various industry experts, ranging from component suppliers to tier 1 companies and OEMs. The break-up of the primaries is as follows:
