“The MV protection relay market is projected to grow at a CAGR of 5.33%, from 2018 to 2023.”

The MV protection relay market is projected to reach USD 1,115 million by 2023, from an estimated USD 860 million in 2018, at a CAGR of 5.33%. This can be attributed to the growth of the renewable industry and expansion of transmission & distribution (T&D) networks. Increasing competition from the unorganized sector and lack of investments by governments in grid stability can hinder the growth of the market.

“The digital & numerical relay segment is expected to dominate the MV protection relay market from 2018 to 2023.”

The digital & numerical relay segment held the largest market share in 2017 and is estimated to be the fastest growing segment during the forecast period. The digital & numerical relay segment provides more advantages over electro-mechanical & static relays. It converts voltage and current to digital forms and processes the resulted measurement using a microprocessor. The primary advantages of digital & numerical relay include functional flexibility, reliability, speed, accuracy, and capital cost and maintenance cost savings.

“Industrial segment is expected to be the fastest growing segment in MV protection relay market during the forecast period.”

The industrial segment is expected to grow at the fastest rate between 2018 and 2023. Industrial segment includes oil & gas, chemical & pharmaceutical, metals & mining, and others. MV protection relays are used in industries to prevent damages to expensive instruments caused by overload, over temperature, overcurrent, jams and undercurrent, high resistance winding faults, current and voltage unbalance, phase loss, and phase reverse. Asia Pacific is the largest consumer of industrial protection relays with construction spending increasing in countries such as India, China, and Japan. For instance, the Indian government is focusing extensively on developing infrastructure projects to boost its economic growth. Few of these infrastructure projects include Charanka Solar Park, Bharatmala Project, Gujarat-Gorakhpur gas pipeline, and the highest bridge in the world on the river Chenab. This is likely to create a demand for MV protection relays in Asia Pacific.

“Asia Pacific: The fastest growing market for MV Protection Relay.”

Asia Pacific is expected to be the largest market for MV protection relays in 2023 and is projected to grow at the highest CAGR, during the forecast period. Increasing T&D network expansions and industrialization projects in emerging countries such as India and China are some of the key factors responsible for the growth of the MV protection relay market. Moreover, as per IEEMA (Indian Electrical and Electronics Manufacturers Association), electricity generation capacity is expected to increase from 200 GW in 2010 to over 800 GW by 2032. India is undertaking a lot of smart grid and substation projects to fulfil the growing demand for energy. This would create a demand for MV protection relays in the region.
