“Nanomechanical testing market to grow at a higher CAGR during 2018–2023”

The global nanomechanical testing market is expected to grow from USD 279 million in 2018 to USD 345 million by 2023, at a CAGR of 3.65% from 2018 to 2023. The increasing demand for testing various materials to understand its properties on a nanoscale would increase the market for nanomechanical testing services for several applications, such as life sciences, industrial manufacturing, and material development.

“HARDWARE SEGMENT TO CAPTURE LARGER SIZE OF NANOMECHANICAL MARKET, BASED ON OFFERING, BY 2023”

The rising demand for testing various materials to understand its properties on a nanoscale leads to the increasing adoption of nanomechanical testing services for various applications, such as life sciences, industrial manufacturing, and material development. The global market for nanomechanical testing will be dominated by the hardware segment due to increasing advancements by key players toward product innovation leading to the development of systems with higher accuracy.

“ADVANCES IN MICRO-ELECTRO-MECHANICAL SYSTEMS (MEMS) TECHNOLOGY WOULD ENABLE GROWTH OF NANOMECHANICAL TESTING

MARKET AT HIGHER CAGR FROM 2018 TO 2023”

Consumer electronics, industrial electronics, medical devices, gaming consoles, drones, and imaging are a few major applications of MEMS devices. Latest advancements in MEMS technology have led to the development of various new devices. Further, several MEMS devices can be integrated into a single module. However, these developments in MEMS technology have led to severe complexities in the design process, which further makes quantification and modification of mechanical properties extremely difficult. MEMS devices comprise complex materials having diverse physical dimensions with large variations in their properties.
