The global next generation sequencing market is dynamic and witnessing many changes with new products being introduced. The global NGS market will be worth \$2.5 billion in 2014 and is poised to reach \$8.7 billion by 2020.

The NGS market segments such as pre-sequencing products and services, NGS platforms, sequencing services and data analysis/bioinformatics are rapidly growing markets. The overall NGS market is flourishing by continuous innovations and developments in the market aimed at higher throughput, increased accuracy, and affordable costs. Developments in the pre-sequencing, cloud computing, and NGS bioinformatics solutions are major opportunities for this market.

NGS services market is one of the key segments in the NGS market which is estimated to grow at a CAGR of 24.0% by 2020. The growth is driven by increasing demand in diagnostics and pharmaceutical and biotechnology companies.

Sequencing by Synthesis technology will be the fastest growing technology in the coming years. SBS technology has wide applications in the NGS market and can be used for both single read and pair end libraries. Hence the demand for platforms such as HiSeq X Ten, NextSeq 500 and MiSeq is also high.

Presequencing products and services market will also witness high growth and is estimated to grow at 23.5% CAGR in the next six years. The growth can be attributed to the increasing demand for presequencing consumables and instruments as the quality of the end product depends on the presequencing treatment. The growing need for standardized sample preparation solutions and increasing automation in the pre-sequencing workflow step are drivers of this market.

The study is confined to platforms, consumables and services provided by top 4 companies, Illumina, Thermo Fisher (Life Technologies), Roche and Pacific Biosciences. It does not include other NGS platforms and miscellaneous consumables/reagents offered by other companies. Also, market estimation does not consider upcoming technologies or platforms.

About

Objectives Of The Study:

To define, describe, and forecast the global next-generation sequencing market on the basis of products, technologies, applications, and end users

To provide a detailed information regarding the major factors influencing the growth of the market (drivers, restraints, opportunities, industry specific challenges, winning imperatives, and burning issues)

To strategically analyze micromarkets¹ with respect to individual growth trends, future prospects, and contributions to the overall market

To analyze the opportunities in the market for stakeholders and details of the competitive landscape for market leaders

To forecast the revenue of market segments with respect to four main geographies, namely, North America, Europe, Asia, and Rest of the World

To strategically profile key players and comprehensively analyze their market shares and core competencies²

To track and analyze competitive developments such as joint ventures, mergers and acquisitions, new product developments, and research and development in the nextgeneration sequencing market

The study covers the market of four major product segments of global next-generation sequencing (NGS) market, namely, pre-sequencing products and services, sequencing platforms, sequencing services, and data analysis/bioinformatics. The market is also segmented into technologies, applications, and end users.

The definition of the NGS products and services for this market study is as follows: Next-generation sequencing refers to non-Sanger-based high-throughput DNA sequencing technologies. Millions or billions of DNA strands can be sequenced in parallel, yielding substantially more throughput and minimizing the need for the fragment-cloning methods that are often used in Sanger sequencing of genomes.

In the report, three types of services are considered:

Post-purchase Services (For Platforms)

Sequencing Services

Data Analysis Services
