## **Abstracts**

“The non-conductive ink market is projected to register a CAGR of 7% between 2019 and 2024.”

The global non-conductive ink market is estimated to be USD 403 million in 2019 and is projected to reach USD 560 million by 2024, at a CAGR of 7% during the same period. The increasing demand for non-conductive inks due to growing printed circuit board production is expected to drive the demand for non-conductive ink.

Glass accounted for the largest share of the non-conductive ink market.

Glass substrate is projected to be the largest segment of the non-conductive inks market during the forecast period. The growth of the segment is attributed mainly to excellent printability. In electronics application, glass substrates are preferred in displays and photovoltaics.

PCB Panel is the fastest-growing application segment of the non-conductive ink market.

PCB panels are projected to be the largest and the fastest-growing application segment of non-conductive inks during the forecast period. This growth is attributed mainly to the growing production of PCB panels. PCB panels are used in medical devices, consumer electronics, automotive, aerospace, and lighting applications. The growth of these industries is expected to drive the non-conductive inks market.

“Asia Pacific is projected to be the largest non-conductive ink market.”

The non-conductive ink market has been studied for Asia Pacific, North America, Europe, South America, and the Middle East & Africa. Asia Pacific is projected to be the largest non-conductive ink market. The high demand is attributed mainly to the increase in production of PCB panels and rising manufacturing activities in the region. APAC is a hub for electronics and electric equipment. Many foreign investors commenced the manufacturing facilities in the area due to low production costs. This, in turn, is driving the demand for non-conductive ink in the region.
