## **Abstracts**

The global oxygen therapy equipment market is expected to reach USD 4.01 billion by 2022, at a CAGR of 8.7% from 2017 to 2022. The major factors driving this market are the rising incidence of respiratory disorders, growing geriatric population, high proportion of tobacco smoking, inclination towards home-based oxygen therapy, and technical innovations. On the other hand, the growth of this market is hindered to some extent due to the accessibility of low-cost alternates by local manufacturers, strict regulatory guidelines causing delays in product approvals, and Medicare reimbursement rate cuts for home oxygen therapy in the U.S.

Oxygen source equipment to register the highest CAGR during the forecast period

The oxygen therapy equipment market is classified on the basis of products into oxygen source equipment and oxygen delivery devices. The oxygen source equipment segment is expected to grow at a higher rate during the forecast period. This is attributed to the industry players developing innovative products which are small, quiet, and effective leading to higher acceptance from consumers.

Home care settings to dominate the oxygen therapy equipment market during the forecast period

The oxygen therapy equipment market is segmented based on end users into home care settings, hospitals, and ambulatory surgical centers (ASCs) & physician offices. In

2017, home care settings segment is expected to command the largest share and is estimated to grow at the fastest rate as compared to the other segments. This can be attributed to technological developments to develop user-friendly devices and rising usage of home-based therapy, particularly in developed countries across North America and Europe.

APAC is estimated to be the fastest growing regional segment in the global oxygen therapy market during the forecast period

Geographically, the oxygen therapy equipment market is dominated by North America, followed by Europe, Asia-Pacific, and the Rest of the World (RoW). The Asia-Pacific region is estimated to grow at the fastest rate which can be attributed to the large investments in healthcare, rising expenditure on healthcare along with increased coverage of health insurance, and rise in disposable incomes especially in countries like China, Japan, and India.
