Abstracts

Pipeline transportation mode of transportation is mostly used for transport of crude and refined petroleum products such as oil and natural gas. But pipelines are also useful for transporting other fluids such as water, slurry, sewage, and beer. Capsule pipelining using pneumatic tubes provides solution for transporting the solids in some cases. Pipelines are ideal for unidirectional flow of goods and inflationary influences have minimal effect on the transport cost. Pipeline transportation faces the challenges in steady and smooth operation with need of constant surveillance and monitoring. Information communication technology (ICT) can help reduce the costs, streamline the management process, improve communication efficiency, and ensure safety and security.

This report provides a detailed analysis of the markets for all the solutions of pipeline transportation such as security solution, automation and control, integrity solution, tracking and monitoring solution, and communication solution; services: consulting, managed services, and maintenance and support services. It includes detailed analysis of pipeline transportation type such as oil and gas, coal, water, chemical and others; and geographical split across the globe such as North America, Europe, Asia-Pacific, Middle East and Africa, and Latin America. The report's strategic section sketches the competitive scenario in the pipeline transportation market. The notable market players in this domain include ABB, Alstom, Siemens, GE Transportation, Trimble, FMC Technologies, and Rockwell Automation.

MarketsandMarkets expects this market to grow from \$8.68 billion in 2014 to \$13.97 billion by 2019, at an estimated Compound Annual Growth Rate (CAGR) of 10.0% from 2014 to 2019.
