## **Abstracts**

“High demand from industrial vertical fueling growth of power line communication market”

The power line communication market is expected to grow at a CAGR of 9.53% between 2017 and 2023, to reach USD 9.45 billion by 2023 from USD 5.47 billion in 2017. The high demand for power line communication technology-based products from the industrial vertical, especially for the substation communication application, is one of the major factors fueling the growth of the said market. On the other hand, one of the major factors restraining the growth of this market is the high noise generation on power lines limiting the data transmission quality of power line communication devices.

“Indoor networking application expected to witness significant growth during forecast period”

The power line communication market for the indoor networking application is expected to witness a significant growth during the forecast period. The said market is mainly being driven by the high adoption of power line adapters for the network expansion application, especially in the residential vertical.

“Energy management and smart grid application expected to grow at highest CAGR during forecast period”

The power line communication market for the energy management and smart grid application is expected to witness a significant growth during the forecast period. The increasing penetration of power line technology in the vehicle communication and electric vehicle charging application is one of the leading factors driving the growth of the power line communication market for the energy management and smart grid application. The SAE combo charging system (CCS) standard compatible electric vehicle charging station is gaining popularity, especially in the Americas and Europe. Power line communication technology is used in the CCS standard compatible electric vehicle charging station for communication. This factor is expected to fuel the growth of the power line communication market for the electric vehicle charging application.

“APAC to witness significant growth during forecast period”

The power line communication market in APAC is expected to grow at the highest CAGR during the forecast period. China, Japan, and South Korea are some of the major countries driving the growth of the said market in this region. The high demand for power line communication technology-based products from the industrial and residential verticals in these countries is one of the major factors fueling the growth of the said market.
