Abstracts

Probiotics have therapeutic value and prove beneficial for the treatment of atopic dermatitis and skin sensitivity, when used in natural skincare products help to deliver good bacteria to the skin. These bacteria can help restore the natural balance of the skin, ensuring it functions the way it should and is replenished with the nutrients it needs to stay protected from the elements. Probiotics are also an effective anti-inflammatory, due to which they help and soothe redness, irritation, and skin conditions, including acne, rosacea, and dry skin. The increasing use of probiotics in the personal care segment is attributed to the growing consumer interest in health and grooming. It has Lactobacillus johnsonii aids in the protection of Langerhans cells from being damaged by UV radiation, Lactobacillus pesodoris keeps the odor-producing bacteria away from the body.

“Probiotics can replace pharmaceutical agents”

The increasing demand for probiotics has shown that customers prefer products with proven health benefits. The increasing evidence of health benefits associated with probiotics for health restoration has increased the customer expectations related to probiotics. This inclination toward a safe, natural, and cost-effective substitute for drugs has led to the application of probiotics as pharmaceutical agents. Beneficial effects of

probiotics as pharmaceutical agents seem to be strain- and dose-dependent. Clinical trials have displayed that probiotics may cure certain disorders or diseases in humans, especially those related to the GI tract.

“Yeast probiotics can be used as antibiotics or growth promoters.”

Yeast, as a probiotic, is actively used in applications such as food, beverages, pharmaceuticals, and industrial enzymes. For a yeast strain to be selected as a probiotic, it needs to have a high tolerance to acidity, should show resistance to bile salts, must have an adhesion capacity to the intestinal cells, and should demonstrate an immunostimulant effect. According to the European Food Safety Authority (EFSA), *Saccharomyces cerevisiae* is the most commonly used yeast used in food fermentation. Some yeast strains have anti-inflammatory properties and can prevent intestinal infections.

Break-up of Primaries:

By Company Type: Tier 1 - 43%, Tier 2 - 41%, and Tier 3 - 16%

By Designation: Managers - 54%, and CXOs - 46%

By Region: Europe - 19%, Asia Pacific – 32%, North America - 24%, South America- 15%, and RoW – 10%

Leading players profiled in this report:

Probi Ab

Nestl?

Archer Daniels Midland Company

Danone

DuPont

Yakult Honsha

General Mills

Kerry

BioGaia

Morinaga Milk Industry Co., Ltd.

Glowbiotics LLC

Eminence Organic Skin Care

Esse Skin Care

L'Oréal

Estée Lauder

TULA Skincare

Aurelia London

LaFlore Probiotic Skincare

Gallinée Microbiome Skincare

Biomilk Skincare

Research Coverage:

The report segments the probiotics food & cosmetics market on the basis of distribution channel, ingredients, product type, and regions. In terms of insights, this report has focused on various levels of analyses—the competitive landscape, end-use analysis, and company profiles, which together comprise and discuss views on the emerging & high-growth segments of the global probiotics food & cosmetics, high-growth regions, countries, government initiatives, drivers, restraints, opportunities, and challenges.

Reasons to buy this report:

Probiotics Food & Cosmetics Market by Product Type (Probiotics Food and Beverages, Dietary Supplements, Cosmet...

To get a comprehensive overview of the probiotics food & cosmetics market

To gain wide-ranging information about the top players in this industry, their product portfolios, and key strategies adopted by them

To gain insights about the major countries/regions in which the probiotics food & cosmetics market is flourishing
