## **Abstracts**

“The snack pellets market is projected to grow at a CAGR of 5.3%.”

The snack pellets market is estimated to account for about USD 2.0 billion in 2018 and is projected to grow at a CAGR of 5.3%, to reach about USD 2.5 billion by 2023. Hectic lifestyles of people and the need for on-the-go consumption have encouraged the savory snack manufacturing industry to produce new products that could meet these rising demands from the working-class consumers. In addition to this, the growing focus on facility expansion, marketing schemes, and information exchange programs for creating awareness to enhance the consumption of snack pellets have contributed to the growth of the market. Consumer preferences in emerging economies such as China, India, Brazil, and the Middle East have gradually transitioned from traditional home-made breakfasts and snacking meals to ready-to-eat products over the last couple of decades. However, high acrylamide content in snack foods is projected to inhibit the market growth during the forecast period.

“The potato segment is estimated to account for the largest share in the market in 2018.

On the basis of type, the snack pellets market is segmented into potato, corn, rice, tapioca, multigrain, and others. The potato segment is estimated to account for the

largest share in 2018. Potato starch is the most widely used ingredient in the production of snack pellets. This is due to the increasing demand for potato starch, as it contains longer starch chains in the amylopectin molecules, which enhances the quality of pellets. It also offers high bulk density, various flavors, and choices for consumers of all age groups.

“The die-face segment in the snack pellets market is projected to record the fastest growth through 2023.”

Based on form, the die-face segment recorded the fastest growth in the snack pellets market. Die-face technology offers shapes that require minute cuts & edges. This enables manufacturers to produce shapes of animals and cartoon characters, attracting another class of consumers comprising children. The market for these forms of products is growing fast, mainly due to the diversity of products in terms of shapes, textures, colors, and flavors.

“The snack pellets market is projected to witness a high growth in Asia Pacific during the forecast period.”

The snack pellets market in Asia Pacific is projected to witness the fastest growth during the forecast period, due to the rising awareness about snack pellets and technological advancements in the food & beverage industry. Availability of machinery for the production of high-quality products at economical prices in this region has created profitable growth opportunities for the snack pellets market.

Snack pellets are those unexpanded and semi-finished products that are mostly cooked by hot air expansion or by frying into ready-to-eat snacks through extrusion process. Snack pellets are preferred by snack manufacturers owing to their high stability, longer shelf life, and bulk density. This makes snack pellets convenient for storage and transport when compared to snacks made by direct expansion.

The snack pellets are available in wide range of base ingredients such as potato, corn, tapioca, rice, and mixed grains. Snack pellets are available in various textures, from soft and crispy to hard and crunchy, depending on the method of processing; especially drying. The snack pellets market is estimated to grow with the increasing awareness of promotional schemes, knowledge extension programs related to raw material, processing unit, and emerging snack pellets trends, and demand for healthy ready-to-
